- How do we compute the transition function δ , i.e., how do we fill the table?

Assignment Project Exam Help

- Let B_k denote the prefix of the string B consisting of the first k characters.

- If we are given a string B of length m such that B_k is a prefix of B for all $k \leq m$, then we can compute the transition function δ for the automaton A as follows:

Add WeChat edu_assist_pr

- How do we compute the transition function δ , i.e., how do we fill the table?

Assignment Project Exam Help

- Let B_k denote the prefix of the string B consisting of the first k characters.

- If we have B_k ; if a happens to be $B[k+1]$, then $B_k a = B_{k+1}$.

- Thus, if a happens to be $B[k+1]$, then $B_k a = B_{k+1}$.

- How do we compute the transition function δ , i.e., how do we fill the table?

Assignment Project Exam Help

- Let B_k denote the prefix of the string B consisting of the first k characters.

- If we can find a suffix of B_k which is also a prefix of B , then we can match the string against itself. <https://eduassistpro.github.io>

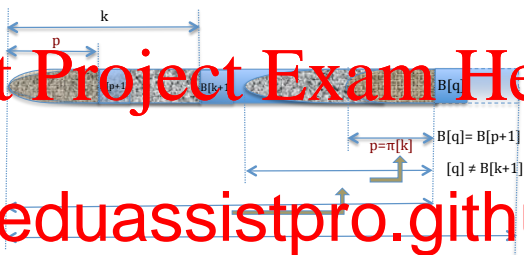

- Thus, if a happens to be $B[k+1]$, then $B_k a = B_{k+1}$. Add WeChat edu_assist_pro

- We do that by matching the string against itself: we can recursively compute a function $\pi(k)$ which for each k returns the largest integer m such that the prefix B_m of B is a proper suffix of B_k .

The Knuth-Morris-Pratt algorithm

1: **function** **Compute-Prat** $\text{function}(B)$
2: $m \leftarrow \text{length}[B]$
3: let $\pi[1..m]$ be a new array
4: $\pi[1] = 0$
5: $k = 0$
6: **for** q
7: **while**
8: $B[k+1] \neq B[q]$
9: $k = \pi[k]$
10: **if** $B[k+1] = B[q]$
11: $k = k + 1$
12: $\pi[q] = k$
13: **end for**
14: **return** π
15: **end function**

Assume that len
we have already f
 k ; to compute $\pi[q]$ we check if $B[q] = B[k+1]$; if true then $\pi[q] = k+1$; if not true then we find $\pi[k] = p$; if now $B[q] = B[p+1]$ then $\pi[q] = p+1$.

The Knuth-Morris-Pratt algorithm

- We can now do our search for string B in a longer string A :

```
1: function KMP-Matcher( $A, B$ )
2:    $n \leftarrow \text{length}[A]$ 
3:    $m \leftarrow \text{length}[B]$ 
4:    $\pi \leftarrow \text{compute\_pi}(B)$ 
5:   for  $i \leftarrow 0$  to  $n - m$ 
6:     fo
7:       while  $q > 0$  and  $B[q + 1] \neq A[i]$ 
8:          $q = \pi[q]$ 
9:       if  $B[q + 1] == A[i]$ 
10:         $q = q + 1$ 
11:      if  $q == m$ 
12:        print pattern occurs with shift  $i - m$ 
13:       $q = \pi[q]$ 
14:   end for
15: end function
```
